Ritu Nayar 2015-04-13

This book offers clear, up-to-date guidance on how to report cytologic findings in cervical, vaginal and anal samples in accordance with the 2014 Bethesda System Update. The new edition has been expanded and revised to take into account the advances and experience of the past decade. A new chapter has been added, the terminology and text have been updated, and various terminological and morphologic questions have been clarified. In addition, new images are included that reflect the experience gained with liquid-based cytology since the publication of the last edition in 2004. Among more than 300 images, some represent classic examples of an entity while others illustrate interpretative dilemmas, borderline cytomorphic features or mimics of epithelial abnormalities. The Bethesda System for Reporting Cervical Cytology, with its user-friendly format, is a "must have" for pathologists, cytopathologists, pathology residents, cytotechnologists, and clinicians.

**The Bethesda System for Reporting Thyroid Cytopathology**

Syed Z. Ali 2017-10-12

The first edition of *The Bethesda System for Reporting Thyroid Cytology* was published in 2010 and has greatly influenced the practice of thyroid cytopathology. The terminology proposed and illustrated in this text has been widely adopted not only in the U.S. but also abroad. It has become an essential text for pathology trainees and practicing pathologists examining thyroid fine needle aspiration (FNA) specimens. Since 2010, there have been a number of important advances in the management of patients with nodular thyroid disease and in the understanding of the biology of thyroid cancer. This new edition includes these advances that impact terminology for reporting thyroid cytopathology. In particular, it incorporates a discussion of the recently implemented and now widespread use of molecular testing of thyroid FNA samples, which has transformed the management of patients with nodular thyroid disease in the U.S.. In addition, this edition accommodates the recent changes to the classification of thyroid cancer, most notably the introduction of a new thyroid diagnosis, that of "non-invasive follicular tumor with papillary-like nuclear features (NIFTP)". Thoroughly revised and updated, *The Bethesda System for Reporting Thyroid Cytology*, Second Edition will provide the reader with a unified approach to diagnosing and reporting thyroid FNA interpretations. It serves as a reference guide not just for pathologists, but also endocrinologists, surgeons, and radiologists.

This atlas is the offspring of the "The National Cancer
Institute (NCI) Thyroid Fine Needle Aspiration (FNA) State of the Science Conference,” hosted by the NCI and organized by Dr. Andrea Abati. Preparations for the conference began 18 months earlier with the designation of a steering committee and the establishment of a dedicated, permanent web site. The meeting took place on October 22 and 23, 2007 in Bethesda, Maryland and was co-moderated by Susan J. Mandel and Edmund S. Cibas. The discussions and conclusions regarding terminology and morphologic criteria from the meeting were summarized in publications by Baloch et al. and form the framework for this atlas. The atlas is organized by the general categories of “Nondiagnostic,” “Benign,” “Follicular Neoplasm/Suspicious for a Follicular Neoplasm”, “Suspicious for Malignancy,” and “Malignant,” and it includes the definitions and morphologic criteria of these categories as set forth by Baloch et al. The majority of the conference participants also agreed on a category of “undetermined significance,” which is incorporated in this atlas (Chap. 4). It is critical that the cytopathologist communicate thyroid FNA interpretations to the referring physician in terms that are succinct, unambiguous, and helpful clinically. We recognize that the terminology used here is a flexible framework that can be modified by individual laboratories to meet the needs of their providers and the patients they serve.

The Bethesda System for Reporting Cervical/Vaginal Cytologic Diagnoses - Robert J. Kurman 2012-12-06 The Bethesda System was developed at a National Cancer Institute sponsored workshop in December 1988 to provide uniform diagnostic terminology that would facilitate communication between the laboratory and the clinician. The format of this report includes a descriptive diagnosis and an evaluation of specimen adequacy. A second workshop was held in April 1991 to evaluate the impact of The Bethesda System in actual practice and to amend and modify it where needed. One of the major recommendations of this second meeting was that precise criteria should be formulated for both the diagnostic terms and for the descriptors of specimen adequacy. That is the intended purpose of this report.

The Bethesda System for Reporting Thyroid Cytopathology - 2010 Thyroid fine needle aspiration is one of the most commonly performed cytologic procedures and is the standard diagnostic method for managing the patient with a thyroid nodule. Until now, there has been no uniform system for reporting the results of thyroid fine needle aspiration (FNA) in the U.S. The terminology described in this book is an important advance in the field of cytopathology. It represents the results of the multidisciplinary National Cancer Institute Thyroid Fine Needle Aspiration State of The Science Conference, held in Bethesda, MD in October, 2007. The Bethesda System for Reporting Thyroid Cytopathology will provide the reader with a unified approach to diagnosing and reporting thyroid FNA interpretations. It will serve as a reference guide not just for pathologists, but also endocrinologists, surgeons, and radiologists.

The Bethesda System for Reporting Cervical Cytology - Diane Solomon 2004-04-08 The Bethesda System for reporting the results of cervical cytology was developed as a uniform system of terminology, providing clear guidance for clinical management. The Bethesda System 2001 Workshop was convened to evaluate and update the 1991 Bethesda System terminology for reporting the results of cervical cytology. The New Edition has been extensively updated and revised to reflect the new Bethesda System. The new terminology reflects important advances in biological understanding of cervical neoplasia and cervical screening technology. The handbook has now been expanded to include more than 185 full color illustrations (twice the number of color images than in the 1st edition). New to the Second Edition are sections that address ancillary testing, including HPV, the inclusion of educational notes and recommendations, computerized screening, and anal cytology, as well as sample reports. In line with recent advances, the text and images address liquid-based cytology in addition to conventional cytology. In addition to its user-friendly, outline format, the inclusion of index allows the reader easier access to the information.

The Cervicovaginal Smears Classification by Using The Bethesda System

Toqa 2015-07-13 Cervical cancer is a preventable malignancy, yet every year over 530,000 women are diagnosed with and over 275,000 women die from the disease worldwide. The distribution of cases and deaths is commoner in low and middle income countries, which have 86% of the global cases and 88% of the total deaths. The Bethesda
system aims to simplify cervical smear reporting and make it more reproducible and facilitates the communication between pathologist & gynecologist. The Bethesda system is of validity in providing a uniform format for cervical cytology report, which is intended to communicate clinically relevant information using standardized terminology.

The International System for Serous Fluid Cytopathology - Ashish Chandra 2020-11-05 This book is the culmination of an international effort to bring consistency and diagnostic efficiency to effusion cytology for the sake of patient care. The authors recognize special challenges in serous fluid cytopathology, such as reporting the presence of Mullerian epithelium in peritoneal fluids. What is an appropriate serous fluid volume to ensure adequacy? How should mesothelial proliferations be reported and is it appropriate to make an interpretation of malignant mesothelioma? How specific should a report be regarding the origin and subtyping of tumors found in serous fluids? What are the appropriate quality monitors for this specimen type? Special chapters on considerations for peritoneal washings, cytopreparatory techniques, mesothelioma and quality management are included to address these issues. The text contains literature reviews that elucidate existing evidence in support of current practices and recommendations. Expert opinions on where evidence was lacking, the most common practices were adopted by consensus, and where there was no commonality, are employed. Written by experts in the field, The International System for Serous Fluid Cytopathology serves as a collaborative effort between the International Academy of Cytology and the American Society for Cytopathology and calls upon participation of the international cytopathology and oncology communities to contribute to the development of a truly international system for reporting serous fluid cytology.

Thyroid FNA Cytology - Kennichi Kakudo 2019-05-06 This book offers a comprehensive
Practical Diagnostic Approaches in Non-Gynaecologic Cytology

This book presents rational diagnostic approaches to common areas of cytopathology, such as thyroid, lymph node and effusion cytology. It discusses differential diagnoses for each site, and describes a systematic approach to narrow down differential diagnoses in a logical manner based on cytomorphology and the judicious application of ancillary tests. Further, it introduces discriminatory panels of immunohistochemical tests, with an emphasis on patient-centred approaches with active clinicopathologic correlations. In addition, it provides practical recommendations for optimizing tissue triage for ancillary testing, in terms of both diagnostic and therapy-related testing. The book also includes sample diagnostic reports to help readers formulate appropriate comments and to aid clinicians in specific clinical scenarios, as well as test cases for readers to apply their diagnostic and specimen triage algorithms. The book equips readers to apply logical approaches to sound cytopathology reporting in daily clinical practice, guiding them through specimen collection and triage to diagnostic workup based on morphologic and clinical features, and writing rational and clinically useful diagnostic cytology reports with a focus on clinicopathologic correlation. As such it is relevant for practising cytopathologists and pathology trainees as well as for cytologists (cytotechnologists) and other clinicians involved in cytopathology diagnostic processes.
